

CBSC Trends Over Time Project
An Overview of my Project: CBSC Trends Over Time
Lauren Fowler

I. Poster

The purpose of this project was to use the survey data obtained from the students in the class and create a post containing analysis and conclusions of the data. For the project, I wanted to analyze how weather impacts the time students spend outside, as well as how their mood is impacted by the amount of time they spend outside. Analysis of the data was run in R, and then a poster was created showcasing the background, methodology, results, conclusion, and further directions of the project.
