

Analysis of Social Networks Project Impact

Lauren Fowler

This project was impactful as it taught me the skills required to conduct social network analysis. Specifically, I was able to learn how to analyze networks using a new package in R, which made visualization and analysis of networks a lot easier to perform and interpret. As the field of social network analysis increases, these skills will be beneficial as I will be able to analyze a variety of networks to understand how and why people are forming groups in certain ways and the implications of this. Overall, when wanting to understand more about how and why people form networks in the way that they do, these skills will be of much use to me.
